The **Best** Compatibility with OpenVMS.

1

Your organization is making a substantial investment in OpenVMS — the highly available, standards compliant and secure operating system that can effectively meet your future business critical computing requirements.

Only Digital's DEC OSF/1 provides a **higher level of compatibility** with OpenVMS than any other UNIX available today.

Using this Digital coexistence strategy, you can best utilize your resources — old and new — without disruption. And you won't have to abandon your information technology investment — you'll **build** on it.

There is more software in common between OpenVMS and DEC OSF/1 than between OpenVMS and other UNIXes.

And Here Are the 3 **Best** Reasons!

The **Best** Tools for Integrating UNIX and OpenVMS.

Now, Digital's strategic partnering with the highly respected Boston Business Computing (BBC) and Sector 7 makes the *best* UNIX an even better choice.

BBC and Sector 7 products emulate the OpenVMS environment on DEC OSF/1, so your organization can reap the benefits of UNIX, realize tremendous savings by avoiding retraining, and still offer end users the familiar look and feel of OpenVMS.

What's more, as evidence of its continuing commitment to your success, Digital bundles these software solutions with its just released Version 3.0A of the DEC OSF/1 operating system on one easy-to-install CD-ROM — **free of charge**.

The **Best** UNIX Operating System on the **Best** UNIX Platform.

When you run DEC OSF/1 on Digital's 64-bit Alpha AXP systems, your organization can tap the full power of the **world's fastest** general purpose computing systems. From workstations and PCs to enterprise servers, only Digital's Alpha AXP systems deliver the industry's highest open performance platform. With DEC OSF/1, you not only get the advantages of a full 64-bit operating system, but you also get the most feature-rich UNIX. And with Version 3.0A, you now also get symmetric multi-processing for economical and efficient performance upgrades.

And because DEC OSF/1 **and** OpenVMS run so well on Alpha AXP systems, you'll move effortlessly between the two operating systems. In fact, now **both** DEC OSF/1 and OpenVMS are XPG4 branded and licensed by X/Open Company Limited, ensuring conformance with X/Open CAE Specifications.
